General information on verification of EPD from EPD tools:

Independent verification of data, other environmental information and the declaration according to ISO 14025:2010, § 8.1.3 and § 8.1.4. Verification of each EPD is made according to EPD-Norway's guidelines for verification and approval requiring that tools are i) integrated into the company's environmental management system, ii) the procedures for use of the EPD tool are approved by EPD-Norway, and iii) the process is reviewed annually by an independent third party verifier. See Appendix G of EPD-Norway's General Programme Instructions for further information on EPD tools

Verification of EPD tool:

Independent third party verification of the EPD tool, background data and test-EPD in accordance with EPDNorway's procedures and guidelines for verification and approval of EPD tools.

Third party verifier:

Martin Erlandsson, IVL, Swedish Environmental Rese

Comparability:

EPD of construction products may not be comparable if they not comply with EN 15804 and seen in a building context.

Development and verification of EPD:

The declaration is created using EPD tool lca.tools ver EPD2022.03, developed by LCA.no. The EPD tool is integrated in the company's management system, and has been approved by EPD Norway.

Product

Product description:

Cement is a hydraulic binder for the production of concrete, dry mortars and for ground stabilisation.

Product specification

Portland composite cement with granulated blast furnace slag and limestone as clinker replacement.

Materials	Value	Unit
Clinker	65-79	%
Granulated blast furnace slag and limestone	21-35	%
Others	0-5	%

Cut-off criteria:

All major raw materials and all the essential energy is included. The production processes for raw materials and energy flows with very small amounts (less than 1%) are not included. These cut-off criteria do not apply for hazardous materials and substances.

Allocation:

The allocation is made in accordance with the provisions of EN 15804. Incoming energy and water and waste production in-house is allocated equally among all products through mass allocation. The recycling process and transportation of the material is allocated to this analysis.

Data quality:

Specific data for the product composition are provided by the manufacturer. The data represent the production of the declared product and were collected for EPD development in the year of study. Background data is based on EPDs according to EN 15804 and different LCA databases. The data quality of the raw materials in A1 is presented in the table below.

Additional technical information:

The A4-part (transport) in "LCA: Results" was calculated from Broceni, Latvia via Liepaja, Latvia to the terminal in Västerås, Sweden. A4-results from Broceni, Latvia via Liepaja, Latvia to other terminals are as follows:

- to Landskrona, Sweden = 21 kgCO2eq per tcement
- to Surte, Sweden = 25 kgCO2eq per tcement
- to Gävle, Sweden = 18 kgCO2eq per tcement
- to Loviisa, Finland = 19 kgCO2eq per tcement
- to Naantali, Finland = 17 kgCO2eq per tcement

LCA: Scenarios and additional technical information

The following information describe the scenarios in the different modules of the EPD.

Transport from production place to user (A4)	Capacity utilisation (incl. return) %	Distance (km)	Fuel/Energy Consumption	Unit	Value (Liter/tonne)
Ship, Cement boat	50,0 %	409	0,005	l/tkm	2,05
Truck, over 32 tonnes, EURO 6	53,3 %	110	0,023	l/tkm	2,53

LCA: Results

The LCA results are presented below for the declared unit defined on page 2 of the EPD document.

Remarks to environmental impacts

The parameter GWP (A1-A3) includes 93 kgCO2-eq per tcement deriving from fossil and 93 kgCO2-eq per tcement from non-fossil components when combusting secondary (alternative) fuels for the production of cement clinker. In accordance with the "polluter pays" principle /EN 15804/, the emissions will be added to the production system that caused the waste.

However, in this EPD, the CO2 contribution from components of secondary (alternative) fuels has not been deducted. This is to be able to compare calculated global warming from cement regardless of the status of the waste in different countries.

1. The results of this environmental impact indicator shall be used with care as the uncertainties on these results are high or as there is limited experienced with the indicator

2. This impact category deals mainly with the eventual impact of low dose ionizing radiation on human health of the nuclear fuel cycle. It does not consider effects due to possible nuclear accidents, occupational exposure nor due to radioactive waste disposal in underground facilities. Potential ionizing radiation from the soil, from radon and from some construction materials is also not measured by this indicator.

GWPIOBC	kg CO ₂ -eq	5,24E+02	1,59E+01		

GWP-IOBC: Global warming potential calculated according to the principle of instantaneous oxidation. In order to increase the transparency of biogenic carbon contribution to climate impact, the indicator GWP-IOBC is required as it declares climate impacts calculated according to the principle of instantaneous oxidation. GWP-IOBC is also referred to as GWP-GHG in context to Swedish public procurement legislation.
